TOWARDS BIG DATA Informatics tools for data manipulation Course II

Dr. Mario Barbato

Faculty of Agriculture, Food and Environmental Sciences, Università Cattolica del Sacro Cuore

Objectives

This course follows and expands on the “Towards Big Data - Informatics tools for data manipulation I” course. Hence, although not mandatory attendance of the former is strongly encouraged.

The participants will engage with programming concepts and constructs, will develop algorithms and implement them into scripts first, and custom functions then.

The participants will acquire the basic knowledge necessary to significantly simplify and automatize their analysis routines.

Course outline

1. Programming 101 [6 hours]
 - a. Programming constructs.
 - b. Functional programming and algorithms.
2. R programming specifics [2 hours]
 - a. Custom functions in R.
 - b. More on R visualisation.
